

# Dallam School

## Curriculum Overview

**Department: Biology**  
**Year Group: 12**

Autumn		Spring		Summer	
Cell structure and function (7 lessons)	Biological molecules and nucleic acids (15 lessons)	Biological membranes and Cell diversity (14 lessons)	Enzymes (8 lessons)	Exchange and transport (19 lessons)	Disease and biodiversity (22 lessons)
<b>Explain how the structure of cells relates to their function</b>	<b>Explain the structure of macromolecules</b>	<b>Explain how molecules pass in and out of cells and explain how cells divide</b>	<b>Explain how metabolism relies on enzymes</b>	<b>Explain how surface area to volume ratio determines the need for ventilation</b>	<b>Explain how pathogens cause harm and how the body defends itself</b>
By the end of this topic pupils will know <i>(key knowledge, including tier 3 vocabulary)</i>	By the end of this topic pupils will know <i>(key knowledge, including tier 3 vocabulary)</i>	By the end of this topic pupils will know <i>(key knowledge, including tier 3 vocabulary)</i>	By the end of this topic pupils will know <i>(key knowledge, including tier 3 vocabulary)</i>	By the end of this topic pupils will know <i>(key knowledge, including tier 3 vocabulary)</i>	By the end of this topic pupils will know <i>(key knowledge, including tier 3 vocabulary)</i>
<ul style="list-style-type: none"><li>➤ Cells have many organelles that relate to their function.</li><li>➤ An example of a prokaryotic cell is a bacteria, they have plasmid DNA rather than DNA contained in a nucleus.</li><li>➤ Cells have a cytoskeleton which provides structure and support.</li></ul>	<ul style="list-style-type: none"><li>➤ Water has many important properties.</li><li>➤ Carbon containing compounds are the essential building blocks of life.</li><li>➤ There are many different types of proteins which are important for the functions of life.</li><li>➤ The nucleic acids are DNA and RNA.</li></ul>	<ul style="list-style-type: none"><li>➤ Diffusion, facilitated diffusion and osmosis are methods of substances entering cells.</li><li>➤ Cell membranes have carrier proteins and channel proteins.</li><li>➤ Cells undergo the cell cycle, which includes interphase, prophase, metaphase, anaphase, telophase and cytokinesis.</li></ul>	<ul style="list-style-type: none"><li>➤ The specificity of an enzyme is determined by the shape of its active site.</li><li>➤ The activity of enzymes is determined by finding the rate at which a reaction proceeds.</li><li>➤ The stability of enzymes is affected by high temperatures and extremes of pH.</li></ul>	<ul style="list-style-type: none"><li>➤ Organisms have a range of specialised surfaces for gas exchange.</li><li>➤ The heart is specialised to coordinate the heartbeat.</li><li>➤ Insects have an open circulatory system.</li><li>➤ Plants have transport systems to carry nutrients through a vascular system.</li></ul>	<ul style="list-style-type: none"><li>➤ Pathogens can be transmitted in many ways including via a vector.</li><li>➤ The first line of defence protects humans from disease.</li><li>➤ The third line of defence protects us from disease through the use of B and T lymphocytes.</li></ul>
<b>Keywords</b> <ul style="list-style-type: none"><li>➤ organelle</li><li>➤ microtubule</li><li>➤ microfilament</li><li>➤ cytoskeleton</li><li>➤ intracellular</li><li>➤ prokaryote</li><li>➤ eukaryote</li></ul>	<b>Keywords</b> <ul style="list-style-type: none"><li>➤ tension / adhesion</li><li>➤ monomer / polymer</li><li>➤ condensation</li><li>➤ hydrolysis</li><li>➤ ester bond</li><li>➤ peptide bond</li><li>➤ polynucleotide</li><li>➤ transcription</li><li>➤ translation</li></ul>	<b>Keywords</b> <ul style="list-style-type: none"><li>➤ antigen</li><li>➤ permeable</li><li>➤ receptor</li><li>➤ plasmolysis</li><li>➤ supercoiling</li><li>➤ interphase</li><li>➤ homologous</li></ul>	<b>Keywords</b> <ul style="list-style-type: none"><li>➤ cofactor</li><li>➤ coenzyme</li><li>➤ prosthetic group</li><li>➤ enzyme-substrate complex</li><li>➤ enzyme-product complex</li><li>➤ temperature coefficient</li></ul>	<b>Keywords</b> <ul style="list-style-type: none"><li>➤ operculum</li><li>➤ mass flow</li><li>➤ hydrostatic pressure</li><li>➤ oncotic pressure</li><li>➤ dicotyledonous plant</li><li>➤ plasmodesma</li></ul>	<b>Keywords</b> <ul style="list-style-type: none"><li>➤ parasite</li><li>➤ pathogen</li><li>➤ communicable disease</li><li>➤ non- communicable disease</li><li>➤ disease transmission</li><li>➤ retrovirus</li><li>➤ cytokines</li><li>➤ expulsive reflex</li></ul>

Explain how the structure of cells relates to their function	Explain the structure of macromolecules	Explain how molecules pass in and out of cells and explain how cells divide	Explain how metabolism relies on enzymes	Explain how surface area to volume ratio determines the need for ventilation	Explain how pathogens cause harm and how the body defends itself
They will understand <i>(key concepts)</i>	They will understand <i>(key concepts)</i>	They will understand <i>(key concepts)</i>	They will understand <i>(key concepts)</i>	They will understand <i>(key concepts)</i>	They will understand <i>(key concepts)</i>
<ul style="list-style-type: none"> <li>➤ How the structure of a bacterial cell relates to its function.</li> <li>➤ How the structure of some specialised eukaryotic cells, for example a red blood cell is related to its function.</li> <li>➤ Why some cells have a cell wall and some cells don't need a cell wall.</li> </ul>	<ul style="list-style-type: none"> <li>➤ How the thermostable properties of water and water's ability to act as a solvent allow chemical reactions to take place within cells.</li> <li>➤ How large molecules are built from small monomers and polymers.</li> <li>➤ How proteins are organised at four different levels.</li> </ul>	<ul style="list-style-type: none"> <li>➤ How substances move into and out of cells using channel proteins, carrier proteins and simple diffusion.</li> <li>➤ How to explain the step-by- step process of the cell cycle and mitosis.</li> <li>➤ How variation is caused by independent assortment in meiosis.</li> </ul>	<ul style="list-style-type: none"> <li>➤ How cofactors and inhibitors interact with enzymes and affect their tertiary structure.</li> <li>➤ How active sites are formed to accept non-polar substances.</li> <li>➤ How cofactors, coenzymes and prosthetic groups interact with enzymes.</li> </ul>	<ul style="list-style-type: none"> <li>➤ How gas exchange systems are adapted in plants and animals.</li> <li>➤ How optimum diffusion gradients are reached in the mammalian transport system.</li> <li>➤ The structure, advantages and disadvantages of open and closed circulatory systems.</li> <li>➤ How to detect and diagnose problems with the cardiac cycle.</li> </ul>	<ul style="list-style-type: none"> <li>➤ How to describe the transmission of pathogens including bacteria, viruses, protoctista.</li> <li>➤ How inflammation and clotting helps to reduce damage caused by an infection.</li> <li>➤ How Lymphocytes identify an antigen and produce antibodies for neutrophils to engulf.</li> </ul>
They will know how to <i>(key skills)</i>	They will know how to <i>(key skills)</i>	They will know how to <i>(key skills)</i>	They will know how to <i>(key skills)</i>	They will know how to <i>(key skills)</i>	They will know how to <i>(key skills)</i>
<ul style="list-style-type: none"> <li>➤ Prepare a microscope slide with cells such as plant cells and a blood smear.</li> <li>➤ Use a light microscope to observe cells.</li> <li>➤ Use a graticule to measure a cell.</li> <li>➤ Calculate the total magnification using a scale bar.</li> </ul>	<ul style="list-style-type: none"> <li>➤ Investigate the Benedict's test for reducing sugars.</li> <li>➤ Investigate the Benedict's test for non-reducing sugars.</li> <li>➤ Investigate the iodine test for starch.</li> <li>➤ Investigate the emulsion test for fats.</li> <li>➤ Interpret biological tests using colorimetry.</li> <li>➤ Investigate the biuret test for proteins.</li> </ul>	<ul style="list-style-type: none"> <li>➤ Use a colorimeter to determine how temperature affects the permeability of a cell membrane in a plant.</li> <li>➤ Draw and label a cell undergoing mitosis or meiosis.</li> </ul>	<ul style="list-style-type: none"> <li>➤ Calculate temperature coefficient.</li> <li>➤ Calculate the rate of an enzyme controlled reaction.</li> <li>➤ Investigate the effect of enzyme concentration on an enzyme controlled reaction.</li> </ul>	<ul style="list-style-type: none"> <li>➤ Preform a heart dissection.</li> <li>➤ Preform a Fish gill dissection.</li> <li>➤ Calculate surface area: volume ratio.</li> <li>➤ Calculate heart rate.</li> <li>➤ Calculate water uptake in plants.</li> <li>➤ Investigate phloem transport using radioactive tracers.</li> </ul>	<ul style="list-style-type: none"> <li>➤ Use aseptic technique to culture bacteria.</li> <li>➤ Identify an effective antibiotic by measuring zones of inhibition.</li> </ul>

# Dallam School

## Curriculum Overview

**Department: Biology**  
**Year Group: 13**

Autumn		Spring		Summer	
Communication, homeostasis (10 lessons)	Genetics, Cloning and evolution (19 lessons)	Plant and animal responses (10 lessons)	Neurones and hormones (7 lessons)	Photosynthesis and respiration (13 lessons)	Ecosystems (10 lessons)
Explain how homeostasis is maintained in animals	Explain how PCR and Electrophoresis can analyse a genome	Explain how plants and animals respond to their environments	Explain how hormones and endocrine systems work to maintain homeostasis	Explain the processes of photosynthesis and respiration	Explain how populations are affected by human interaction
By the end of this topic pupils will know (key knowledge, including tier 3 vocabulary)	By the end of this topic pupils will know (key knowledge, including tier 3 vocabulary)	By the end of this topic pupils will know (key knowledge, including tier 3 vocabulary)	By the end of this topic pupils will know (key knowledge, including tier 3 vocabulary)	By the end of this topic pupils will know (key knowledge, including tier 3 vocabulary)	By the end of this topic pupils will know (key knowledge, including tier 3 vocabulary)
<ul style="list-style-type: none"><li>➤ Animals maintain constant internal environments.</li><li>➤ Cell signalling is used in animals.</li><li>➤ Endotherms and ectotherms maintain their body temperature in different ways.</li><li>➤ Excretion is an important part of homeostasis.</li><li>➤ Kidney failure can be treated by dialysis.</li></ul> <b>Keywords</b> <ul style="list-style-type: none"><li>➤ homeostasis</li><li>➤ hormones</li><li>➤ endotherm</li><li>➤ ectotherm</li><li>➤ hepatocytes</li><li>➤ osmoregulation</li></ul>	<ul style="list-style-type: none"><li>➤ Cloning can be useful to humans.</li><li>➤ PCR and electrophoresis is used to observe entire genomes. This process has changed over time.</li><li>➤ Genetic engineering and gene therapy can be used to treat diseases.</li></ul> <b>Keywords</b> <ul style="list-style-type: none"><li>➤ polymerase chain reaction</li><li>➤ genome</li><li>➤ genomics</li><li>➤ gel electrophoresis</li><li>➤ biotechnology</li><li>➤ synthetic biology</li><li>➤ restriction enzymes</li><li>➤ ligase</li></ul>	<ul style="list-style-type: none"><li>➤ Plants respond to their environments through tropisms and nastic movements.</li><li>➤ The brain coordinates responses in the body.</li><li>➤ Muscles contract antagonistically.</li></ul> <b>Keywords</b> <ul style="list-style-type: none"><li>➤ hypothalamus</li><li>➤ pituitary</li><li>➤ reflex</li><li>➤ sliding filament model</li><li>➤ tropisms</li><li>➤ nastic movement</li><li>➤ abiotic stress</li><li>➤ germination</li><li>➤ dormancy</li></ul>	<ul style="list-style-type: none"><li>➤ Animals rely on their nervous and endocrine systems</li><li>➤ There are different types of neurones.</li><li>➤ A synapse is a gap between two neurones where neurotransmitters travel across.</li></ul> <b>Keywords</b> <ul style="list-style-type: none"><li>➤ neurone</li><li>➤ synapse</li><li>➤ neurotransmitter</li><li>➤ vesicle</li><li>➤ insulin</li><li>➤ glucagon</li><li>➤ glycogen</li><li>➤ glycogenolysis</li><li>➤ gluconeogenesis</li><li>➤ glycogenesis</li></ul>	<ul style="list-style-type: none"><li>➤ Photosynthesis is a complex process where plants generate glucose. Many factors affect photosynthesis including carbon dioxide concentration.</li><li>➤ Respiration is a complex process in all living things.</li></ul> <b>Keywords</b> <ul style="list-style-type: none"><li>➤ light dependent</li><li>➤ light independent</li><li>➤ coenzyme</li><li>➤ reduction</li><li>➤ oxidation</li><li>➤ respiratory substrate</li><li>➤ pigments</li><li>➤ link reaction</li><li>➤ krebs cycle</li><li>➤ glycolysis</li><li>➤ phosphorylation</li></ul>	<ul style="list-style-type: none"><li>➤ Carbon is cycled in the environment.</li><li>➤ Nitrogen is cycled in the environment.</li><li>➤ Biomass and energy decrease along a food chain.</li><li>➤ Predators and Prey are impacted by biotic and abiotic factors.</li></ul> <b>Keywords</b> <ul style="list-style-type: none"><li>➤ ecosystem</li><li>➤ population</li><li>➤ community</li><li>➤ biotic factors</li><li>➤ abiotic factors</li><li>➤ edaphic factors</li><li>➤ biomass</li><li>➤ succession</li><li>➤ climax community</li></ul>
